Cloud Display Wizard

AR.

Seize the advantages offered by Vestel Cloud Display Wizard for remote screen management

It's engineered to control Vestel digital signage displays via a web-accessible platform.

Cloud Display Wizard diminishes the necessity for physical intervention and resource allocation correspondingly.

Functioning as a cloud-based control solution, it minimizes operational expenses for principal display modifications.

To manage your device, add the code below to your CMS 17711 Organization AN Organizatio Organization AN

Secured Display Claiming

Wizard client app generates one-time unique code. The unique code serves as the link between the app and the signage. It's utilized to integrate a display onto the Cloud wizard interface and authorize the application. Certificates are employed in the process, ensuring that once a device is claimed, it remains exclusive to that specific account without the possibility of being claimed by any other.

Group Management

Each display can be distinguished by its unique name and sorted into groups tailored to specific needs or preferences. This allows for streamlined control of fundamental actions and settings in groups, offering enhanced efficiency in overseeing multiple displays simultaneously.

Display Overview

Gain valuable insights into each display's ID, Name, RAM, Storage, Firmware version, MAC, and Status etc. This wealth of data enables efficient maintenance and service, ensuring prompt and precise attention to the unique needs of every display. Stay ahead in upkeep and troubleshooting, thanks to the power of detailed information available at your fingertips.

Monitor

On the dashboard, you have access to the total count of displays, groups, and logs. Each display's status, whether active or inactive, and its connection status, online or offline, can be tracked through the device menu.

Additionally, you can monitor the display screen by capturing a screenshot. Utilizing the 'Live Stream' feature, you can view sequential screenshots taken at 10-second intervals.

The log records maintain a history detailing interactions between the system and devices, allowing you to monitor executed commands and responses of displays over a specified timeframe.

Settings Management

Users have the capability to modify display-related various settings. Features of brightness adjustment and weekly power on/off scheduling empower you to optimize energy consumption based on usage scenario, room activity, and environmental lighting condition. Power ON scheduling is also advanced with source select function for starting the display with desired input.

Remote firmware update support allows for seamless enhancements, ensuring devices are equipped with the latest features and improvements without requiring hands-on interaction.

Multiple Users

Cloud Display Wizard enables effortless device control within an internet-connected environment, from a distance, eliminating the need for traveling on-site.

This cost-effective and time-saving advantage can be optimized, especially for managing by collaboration of multiple users added into platform across expansive geographical areas.

You can assign access and permissions to the platform for different roles within the organization. Multiple users may have the principal controls "Turn Off", "Turn On", "Restart", "Set Auto Launch", and "Reset" by executing power commands to the display.
